

SEARCH ENGINE OPTIMISATION PROPOSAL

SEO Growth Strategy for Islamic Financial Time

Prepared by Rank Ray for Islamic Financial Time | September 2026

1. Where islamicft.com Stands Today

Islamic Financial Time operates a sophisticated data platform covering Islamic finance, market intelligence, and Cambridge IFA consultancy services. The platform hosts **57 pages of high-quality content** including market analysis, country reports, news articles, opinion pieces, publications, scholar profiles, and a dedicated mobile application.

The Problem: The entire website is built as a single-page application that loads content exclusively through JavaScript. When Google crawls the site, it sees an empty shell — **just 3 words of text across the entire platform**. None of your 57 pages are being indexed. Your competitors with inferior content are outranking you simply because their sites are readable by search engines.

Technical Issues Detected

Issue	What It Means for Your Business	Severity
No robots.txt file	Google has no instructions on how to crawl your site	Critical
No XML sitemap	Google cannot discover your 57 pages	Critical
No meta descriptions	Google shows blank snippets in search results	Critical
Single-page app with no server-side rendering	Content invisible to all search engines	Critical

No canonical tags	Pages compete against each other in search results	High
No structured data (JSON-LD)	Missing rich results, star ratings, and enhanced listings	High
No Open Graph tags	Links shared on WhatsApp, LinkedIn look unprofessional	Medium
3 external CDN dependencies	Slow page load times affecting rankings	Medium

What's Already Working

✓ HTTPS secure connection ✓ Google Analytics 4 installed ✓ Mobile responsive design ✓ Clean URL structure ✓ Substantial content across 57 pages ✓ Strong brand identity

2. Our Strategy — 4 Phases to Organic Growth

Phase 1: Technical Foundation (Month 1)

We fix the invisible-website problem. This includes generating a proper robots.txt and XML sitemap, adding unique meta titles and descriptions to every public page, implementing prerendering so search engines can read your content, adding canonical URLs and Open Graph tags, deploying structured data across all page types, optimising CDN resources, and connecting Google Search Console.

Phase 2: On-Page Optimisation (Months 1–2)

In-depth keyword research targeting the Islamic finance sector across Pakistan, GCC, and global Muslim markets. We optimise page titles, headings, and content on all key pages including /markets, /analysis, /country-data, and /ift-app. We build a proper internal linking structure connecting related content. We deploy FinancialService, Organization, and NewsArticle schema markup.

Phase 3: Content Authority (Month 2 onwards)

We create deeply researched, humanised 2,000-word articles targeting your niche. Each article is researched, fact-checked, and written to establish Islamic Financial Time as the go-to authority for Islamic finance insights. Content clusters cover Islamic banking, halal investing, shariah-compliant capital markets, sukuk analysis, and regional Islamic finance reports.

Phase 4: Authority Building (Month 3 onwards)

We build high-quality backlinks from Islamic finance directories, industry publications, and relevant financial news platforms. Guest posting on established Islamic economy blogs. Press releases for product launches and data reports. Local citations across Pakistani business directories.

3. Investment Packages

STARTER

PKR 50,000/mo

Landing page creation	2 per month
International SEO (global Muslim markets: UAE, KSA, Malaysia, UK)	✓
App Store Optimisation (ASO for IFT App)	✓
Weekly progress calls	✓
Conversion rate optimisation	✓

4. Why Growth Is the Right Choice

Islamic Financial Time operates in a niche that combines Islamic finance, data analytics, and technology — a space with **low competition but high search demand**. Your competitors are traditional financial news sites that don't understand Islamic finance deeply enough. This is your advantage.

The Growth package solves both problems simultaneously: it makes your 57 pages visible to Google (technical fix) and builds topical authority through 4 deeply researched articles per month. Within 6 months, islamicft.com can become the primary organic search destination for Islamic finance data and analysis in the region.

Expected Timeline:
Month 1: Technical foundation fixed, sitemap submitted, first pages indexed
Month 2: On-page optimisation complete, first blog articles published
Month 3: 10+ keywords entering top 50, organic traffic measurable
Month 6: 20+ keywords on page 1–2, consistent organic traffic growth, authority established

5. Deliverables Summary

Deliverable	Frequency
Technical SEO audit + full fixes	Month 1
On-page optimisation (30+ pages)	Months 1–2
Blog articles (2,000 words, researched, humanized)	4/month
Keyword rank tracking	Weekly
Google Search Console monitoring	Ongoing
Monthly performance report	Monthly
Competitor analysis	Quarterly
Link building (5 high-DA links)	Monthly

6. Terms

Minimum engagement: 6 months. SEO results require 3–6 months to materialise — shorter commitments don't allow enough time for measurable results. Month-to-month billing after the initial 6-month term.
